

PROFESSIONAL SUMMARY

Founder & product manager with CS background. Built Growth Alpha Advisors to 20+ client engagements through customer discovery and product-driven growth. Validated StudioAI with 30+ customer interviews and MVP development. Consulted on product strategy and competitive positioning. Technical depth in Python, Django, SQL, data analysis enables cross-functional collaboration.

SKILLS

Product Management: Product Strategy, Product Discovery, Customer Discovery, Roadmapping, Feature Prioritization (RICE, MoSCoW), PRDs, Competitive Analysis, Go-to-Market Strategy, Product Analytics, A/B Testing

Technical & Analytics: Python, SQL, Django, Git, Pandas, Data Analysis, Google Analytics, Excel, word

Tools: Figma, Jira, Notion.

PROFESSIONAL EXPERIENCE

Co-Founder | Growth Alpha Advisors (Digital marketing & 3D animation agency) 2023- 2026

- Led customer discovery conversations with 30+ businesses to understand workflow challenges; translated insights into service offerings and product positioning
- Scaled company from 2 initial clients to 20+ businesses in 24 months; designed repeatable delivery workflows across design, engineering, and strategy teams
- Built Python-based analytics dashboards measuring campaign performance (reach, engagement, retention); used data to prioritize content formats and inform optimization recommendations
- Drove 3x social media reach increase for KLE University (top-ranked North Karnataka institution) in 3 months through platform-specific content strategy and A/B testing; achieved up to 5,000+ LinkedIn and 2,000+ Instagram follower growth across client engagements
- Hired and trained team of 5; established performance metrics, quality standards, and delivery SLAs; managed P&L across service lines

Founder & Product Manager | StudioAI (AI platform for automating multi-channel marketing asset generation)

- Identified customer problem through Growth Alpha: D2C teams spend 40-60% of production time recreating assets across platforms instead of strategic work
- Conducted 30+ customer discovery interviews with D2C founders, agencies, and marketing teams to validate problem severity, frequency, and market opportunity
- Defined MVP scope, user journeys, and product requirements while balancing customer value with technical feasibility
- Paused development after early validation identified AI output quality gaps, prioritizing customer trust and long-term product quality over launch speed

Product Strategy Consultant (Client Engagement) | Growth Alpha Advisors

Client: DotRyder (Mobility Platform) | Aug 2024 – Jan 2025

- Consulted with DotRyder, a mobility startup, to evaluate product strategy and market positioning within the ride-hailing ecosystem
- Conducted competitive analysis of platforms such as Rapido and Uber Moto to identify differentiation opportunities, pricing insights, and feature gaps
- Prioritized product and business initiatives using customer demand, implementation feasibility, and business impact
- Developed recommendations for go-to-market strategy, service positioning, and pricing to support customer acquisition and growth
- Mapped the rider journey and proposed improvements to enhance user experience and operational efficiency

Python Full Stack Intern | HaegI Technologies | (Nov 2024 – Apr 2025)

- Developed production-ready Django web applications with responsive frontends using Python, HTML, CSS, JavaScript, and SQL while collaborating across the full development lifecycle.
- Built Python-based reporting dashboards using Pandas, NumPy, and Matplotlib, automating data processing and significantly reducing manual reporting effort & Collaborated with cross-functional teams to integrate frontend and backend.

EDUCATION

B.E. Computer Science & Engineering | KLE Institute of Technology | 2021 – 2025 | CGPA: 8.1

PROJECTS

- **Malware Detection System:** Processed a 200GB malware dataset, engineered features, and benchmarked FNN, CNN, and LSTM models, achieving 95–99% accuracy. **Facial Recognition Attendance System:** Built a real-time attendance system using OpenCV and Django, achieving 90%+ face recognition accuracy.
